Visual Studio Code

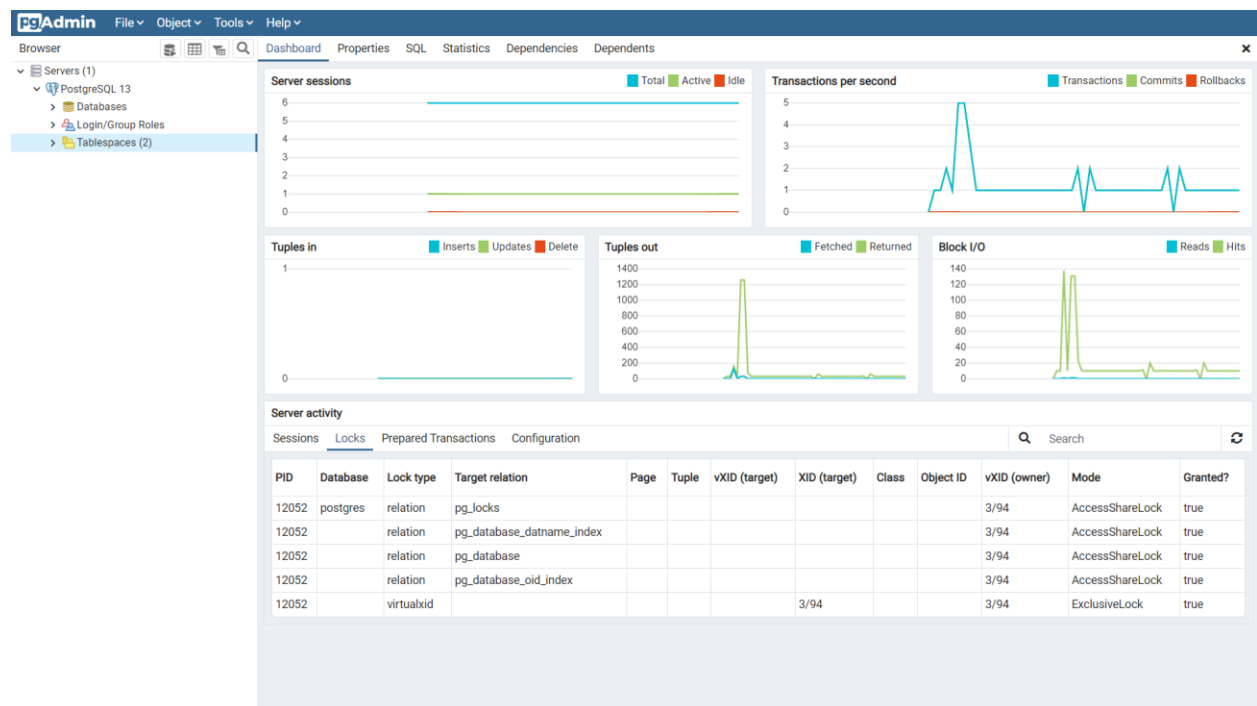

The image shows the Visual Studio Code website landing page. At the top, there's a navigation bar with links to Docs, Updates, Blog, API, Extensions, FAQ, and Learn. A prominent "Download" button is visible. The main heading reads "Code editing. Redefined." followed by the tagline "Free. Built on open source. Runs everywhere." Below this, there's a "Download for Windows Stable Build" button and a link to "Other platforms and Insiders Edition". A large screenshot of the Visual Studio Code interface is displayed, showing the Explorer, Search, and Run and Debug views. The Explorer view shows a file tree with folders like "components" and "App.js". The Search view shows a list of files. The Run and Debug view shows a terminal window with the command "node" and the output "You can now view create-react-app in the browser." The status bar at the bottom indicates the current file is "App.js" and the editor is in "UTF-8" encoding.

The image shows the Visual Studio Code editor interface. The Explorer view on the left shows a file tree with folders like "components" and "App.js". The Search view on the right shows a list of files. The main editor area displays the code for "App.js", which includes imports for React, ReactDOM, and other dependencies. The code defines a function "App" that renders a "div" with a "h1" and a "p". The status bar at the bottom indicates the current file is "App.js" and the editor is in "UTF-8" encoding.

Heroku CLI

Download and install

i The Heroku CLI requires Git, the popular version control system. If you don't already have Git installed, complete the following before installing the CLI:

- [Git installation](#)
- [First-time Git setup](#)

macOS

```
$ brew tap heroku/brew && brew install heroku
```

Windows

Download the appropriate installer for your Windows installation:

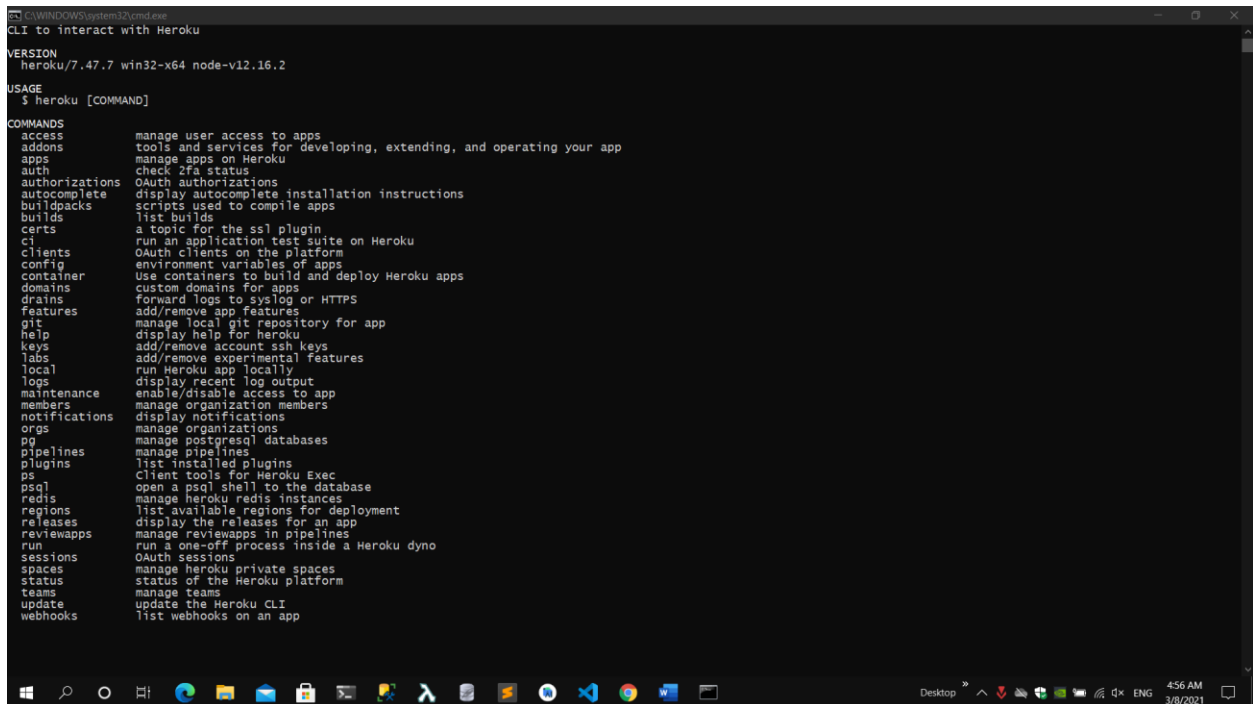

[64-bit installer](#)

[32-bit installer](#)

Ubuntu 16+

Run the following from your terminal:

```
$ sudo snap install --classic heroku
```
